GENERAL MANAGER

These lines aim to introduce the Activity Report of the Valencian Oncology Institute Foundation (IVO) for 2023. This report compiles a detailed account of the healthcare and scientific activity carried out during the year, including outstanding scientific publications, teaching activities, and conferences held, among others.

These pages are a true reflection of the commitment and dedication of the excellent team of more than 600 professionals who make up this institution. As we are about to celebrate half a century of history, I am proud to note that our founding values, such as rigour, the search for excellence, and exquisite care for cancer patients and their families, have transcended to become an ideal calling card for this centre. I sincerely acknowledge and thank all the members of the institution whose professionalism and daily dedication make this possible.

For yet another year, the IVO has put all its efforts and resources at the service of society in the arduous task of fighting cancer. As part of this mission, more than 31,000 Valencian patients have been cared for. This responsibility is also inspired by the commitment acquired, year after year, to wanting to cure and give better care every day. And in this task, the Valencian society continues to be our main supporter, as can be seen from the more than 7,000 new patients who have placed their trust in this institution at such difficult times as when facing a cancer diagnosis. This trust is what drives us to continue improving every day in order to offer the best humane and professional care possible.

With this in mind, in 2023, the IVO received important awards that highlight the value of its care model. In this regard, we were proud to receive the Levante-EMV 2023 Award in the Health category. This award is dedicated to the Valencian society and is a tribute to our continuous commitment to research, excellence, and scientific and technological advances in the service of cancer patients. It is undoubtedly an impetus to continue working to offer the best possible medical and humane care, with the patient and the family always at the centre of our commitment.

Likewise, for the fourth consecutive year, this centre has been distinguished with the award for World's Best Specialized Hospitals 2024, drawn up by the prestigious US magazine Newsweek, a distinction that places us among the best oncology hospitals in the world.

Alongside these milestones, in 2023:

- The expansion of the Day Hospital has been completed to provide more than 50 positions for the administration of systemic treatments.
- The Urology Department has performed more than 500 surgeries using the Da Vinci Xi robot, making it the area with the highest number of operations in the IVO. Our experience and knowledge allows us to deal with highly complex cases referred from other hospitals.
- The 5th edition of the international workshop was held for the first time in Valencia: "Advancing Molecular Diagnostics and Precision Medicine". The symposium brought together more than 150 national and international experts to discuss the latest advances in precision medicine.
- The 3rd edition of the Oncology Refresher Conference for Primary Care was held. This was a space for cross-cutting dialogue addressing the main issues prevalent in daily medical practice that affect oncology patients.

We face 2024 with the same enthusiasm to maintain and promote this institution as a centre of reference for healthcare, research, and teaching when it comes to caring for cancer patients.

WHICH POPULATION IS INCLUDED

The lung cancer screening programme is aimed at healthy male and female subjects aged 55 years or older, either with a smoking habit of 30 years with a minimum consumption pattern of at least a pack a day for 20-30 years and other risk factors or ex-smokers who quit fewer than 15 years ago.

WHAT THE CONSULTATION CONSISTS OF

The consultation consists of taking a medical history and performing a CT scan with a low dose of radiation and without the need for contrast. Respiratory tests are performed in the first consultation, all under the express acceptance of the subject (informed consent). This examination could be extended with other tests if there is a suspected diagnosis.

ACTIVITY

	Cumulative since the start of activity in June 2008 to December 2023
Number of patients included	9.321
Number of reviews	49.730
Number of CT scans	56.054
Number of lung cancers detected	243
Other cancers detected	564

EARLY DIAGNOSIS OF PROSTATE CANCER (OPPORTUNISTIC SCREENING)

WHICH POPULATION IS INCLUDED

Men between the ages of 50 and 75 with no history, or men aged 40 and older with a family history of prostate cancer who have a life expectancy of more than 10 years.

WHAT THE CONSULTATION CONSISTS OF

- This is a simple examination, such as a digital rectal examination,
- together with a conventional blood test for PSA. If the result is > 4ng/ml, the patient is referred to the IVO for urinalysis and a culture. If a urinary tract infection is ruled out, a second PSA test is performed, and if it is still above 4ng/ml, a multiparametric MRI is performed.

Based on the results of these procedures, the relevance of performing a transrectal or transperineal prostate biopsy with ECO/MRI fusion software or a mapping biopsy is discussed in the uro-radiology committee.

ACTIVITY

	Activity from July 2010 to December 2023
Number of patients included	11.110
Number of reviews	34.175
Number of cancers detected	407
