GENERAL MANAGER

I hereby present the Activity Report of the Valencian Institute of Oncology Foundation (IVO) for 2024. It was an especially difficult year for all the people of Valencia, including the members of this institution. Two tragedies left a deep mark: the devastating fire in the city of Valencia—the worst on record to date—and the floods on 29th October, which devastated more than 70 municipalities and claimed the lives of 227 people. Among the irreparable losses, we have mourned the loss of Mr. Antonio Noblejas Sánchez-Migallón, patron of this foundation for almost two decades. Throughout the years, his dedication, generosity, and support were fundamental in promoting our work at the service of cancer patients in Valencia. His legacy will always remain in our memory.

In this highly complex context, I have witnessed the exceptional performance and commitment of the team that makes up our institution. Faced with the challenge of ensuring continuity of care in the areas affected by the cold drop and preventing interruptions in treatment and interventions, the commitment of our professionals and the synergy among the different teams allowed patients to receive the care they needed. My sincere appreciation and thanks to all of them.

As these pages reflect, the IVO has once again put all its efforts and resources at the service of society in the arduous task of fighting cancer. As part of this mission, more than 31,600 Valencian patients have been cared for. This trust is what drives us to continue improving every day in order to offer the best humane and professional care possible.

This year, we have managed to improve our position in the Newsweek 2025 ranking, placing us among the 100 best oncology hospitals in the world for the fifth consecutive year. In addition, we have renewed our OEI (Organisation of European Cancer Institutes)

certification and obtained ESMO (European Society for Medical Oncology) accreditation, as well as National Security Scheme (ENS, for the Spanish abbreviation) certification, which guarantees compliance with the highest standards of patient information protection.

Alongside these milestones, in 2024:

- Our surgical equipment has been reinforced with a new Da Vinci Xi robot. This incorporation makes the IVO the only centre in the Valencian Community with two of these machines.
- More than 1,500 robotic surgeries have been performed since this surgical technology was introduced in 2019.
- Significant improvements have been made, such as the remodelling of the Vascular and Interventional Unit and the adaptation of the facilities where the Psychology, Physiotherapy, and Nutrition units are located.

We face 2025 with the same enthusiasm to maintain and promote this institution as a centre of reference for healthcare, research, and teaching when it comes to caring for cancer patients. Nearing 50 years of history, we reaffirm our commitment to excellence, innovation, and, above all, to our patients and their families.

WHICH POPULATION IS INCLUDED

The lung cancer screening programme is aimed at healthy male and female subjects aged 55 years or older, either with a smoking habit of 30 years with a minimum consumption pattern of at least a pack a day for 20-30 years and other risk factors or ex-smokers who quit fewer than 15 years ago.

WHAT THE CONSULTATION CONSISTS OF

The consultation consists of taking a medical history and performing a CT scan with a low dose of radiation and without the need for contrast. Respiratory tests are performed in the first consultation, all under the express acceptance of the subject (informed consent). This examination could be extended with other tests if there is a suspected diagnosis.

ACTIVITY

	Cumulative since the start of activity in June 2008 to December 2024
Number of patients included	9.398
Number of reviews	51.728
Number of CT scans	56.994
Number of lung cancers detected	246
Other cancers detected	566

EARLY DIAGNOSIS OF PROSTATE CANCER (OPPORTUNISTIC SCREENING)

WHICH POPULATION IS INCLUDED

Men between the ages of 50 and 75 with no history, or men aged 40 and older with a family history of prostate cancer who have a life expectancy of more than 10 years.

WHAT THE CONSULTATION CONSISTS OF

- This is a simple examination, such as a digital rectal examination,
- together with a conventional blood test for PSA. If the result is $> 4\text{ng/ml}$, the patient is referred to the IVO for urinalysis and a culture. If a urinary tract infection is ruled out, a second PSA test is performed, and if it is still above 4ng/ml , a multiparametric MRI is performed.

Based on the results of these procedures, the relevance of performing a transrectal or transperineal prostate biopsy with ECO/MRI fusion software or a mapping biopsy is discussed in the uro-radiology committee.

ACTIVITY

	Activity from July 2010 to December 2024
Number of patients included	11.547
Number of reviews	37.764
Number of cancers detected	459
